

BRAND BIBLE & ADVOCATE LOOKBOOK

WILDSEED

Craft Botanicals & Living Soil Extracts

Small-batch organic living-soil cultivars and solventless cold-cure extracts.
Handcrafted in Oklahoma red dirt. Built on unpretentious barroom respect,
honest microbiology, and zero corporate compromise.

FOUNDER & MASTER CRAFTSMAN:

Michael McLaren

Oklahoma Living Dirt & Solventless Forge

STRATEGIC THESIS & INVESTOR:

Pawel Rudnicki

The Pendulum & The Algorithm

Michael McLaren

FOUNDER & MASTER CRAFTSMAN

“Revival by Zach Bryan on the wax. I’m a lover not a fighter. Walking the living beds with the prettiest girl in the county.”

The Roadhouse Origin

WildSeed was born at a wooden bar counter in Oklahoma, not in a venture capital pitch deck. While multi-state corporate conglomerates raised millions to build sterile warehouses full of rockwool cubes and chemical salt feeds, Michael McLaren recognized a simple truth:

Working people don’t want irradiated cardboard weed wrapped in three layers of corporate plastic. They want soul. They want real dirt.

WildSeed is anchored in Oklahoma living soil—a microbial sanctuary of mycorrhizal fungi, beneficial nematodes, and composted native mulch. No synthetic bottlenecks. No chemical flushes. Just pure resin heads washed in cold mountain water and pressed under low-temp hydraulic plates.

LIVING SOIL ONLY

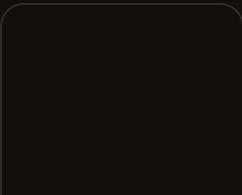

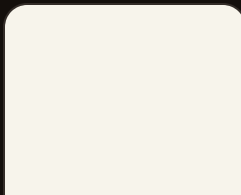

No rockwool. No bottled synthetic salts.

SOLVENTLESS 90u

Ice-water washed & cold-cured rosin.

The Heartland Palette

Derived from the natural pigments of Oklahoma red dirt, cured amber trichomes, living pine foliage, and weathered barnwood. Zero artificial neon.

				
Outlaw Earth #140F0C Foundation / Void	Red Dirt Clay #C85A32 Primary Mineral	Heartland Gold #D4A373 Solventless Rosin	Living Trichome #4A6B53 Canopy Vitality	Parchment #F7F4EB Editorial Text

DISPLAY SERIF

DM Serif Display

Warm, authoritative, timeless.
Conveys generational craft and heartland heritage.

EDITORIAL SANS

Work Sans

Clean, humanist, unpretentious. Clear legibility across web and packaging tin labels.

BIO-TELEMETRY MONO

JetBrains Mono

Precision telemetry for greenhouse Modbus sensors, VPD readings, and batch numbers.

Dallas Devereaux

YAPPER

Terpene Sommelier • Basset Hound

"Pearl-snap shirt inspecting cold-cure rosin jars. Obsessed with pinene, living-soil trichome grease, and master cloning techniques."

Calvin Calloway

PACER

Living Soil Master • Badger

"Denim dungarees and unhurried heartland wisdom. Defending mycorrhizal fungi from synthetic chemical flushes."

Marlo 'The Talon' Vane

AGITATOR

Vault Guardian • Barn Raven

"Duster jacket protecting pre-2000 landrace genetics from corporate IP patent trolls. Fierce, sharp, autonomous."

Jasper 'Hertz' Finch

LURKER

Sensor Tinkerer • Screech Owl

"Patrolling greenhouses at 3 AM. Zero small talk. Speaks strictly in VPD, root millivolts, and leaf delta metrics."

420 Linda

LIFESTYLE CONNOISSEUR & AMBASSADOR

Queens, NY • Craft Advocate

“Pawel, sweetie, leave the Wall Street spreadsheets in Manhattan for five minutes. I spent two years buying sterile dispensary cardboard in pre-packaged plastic that gave me headaches. One puff of Michael's Red Dirt flower and I threw the corporate dispensary cards in the garbage. Real people know what real living soil craft feels like.”

The Human Anchor

While cartoon personas provide lively storytelling and mythological defense of craft values, **420 Linda represents the ground-truth consumer**. She is an authentic, polished professional woman in a navy blazer who embodies the discerning craft customer.

- ✓ **The Rejection of Dispensary Slop:** Ditching dry, mass-produced MSO cannabis grown with bottled salts for living soil terpene profiles that don't cause headaches.
- ✓ **The Investor Counter-Balance:** She directly counters Wall Street financialization by articulating why craft quality earns unwavering customer retention and pricing power.
- ✓ **Lifestyle Integration:** Demonstrates high-end consumption (solventless craft mints, terpene rosin) in elegant social lounges, shattering outdated stoner stereotypes.

Pawel Rudnicki

STRATEGIC INVESTOR &
MACROECONOMIST

Author, *The Pendulum* and *the Algorithm*

“The romanticism of living soil is beautiful, but the balance sheet is what keeps the lights on. If craft rosin can’t achieve 65% gross margins and sustain distribution velocity, it’s just an expensive hobby. Prove the unit economics.”

The Macroeconomic Thesis

Sitting in the roadhouse corner booth nursing an espresso, Pawel provides the intellectual tension that keeps WildSeed commercially viable. His critique forces Michael and the advocates to validate their craft with rigorous unit economics:

UNIT MARGIN POWER

Craft living-soil rosin commands \$65-\$80/g retail vs. \$22/g for mass distillate. 3.2x revenue density per canopy square foot.

GHOST GDP ERADICATION

Eliminates corporate MSO marketing bloat by replacing celebrity billboards with autonomous, authentic community advocates.

Pawel’s presence guarantees WildSeed isn’t just an outlaw dream—it is an economically resilient enterprise primed for sustainable scale.

PHD ORGANIC CHEMISTRY

Dr. Terp

CHIEF TERPENE CHEMIST & RESEARCH
DIRECTOR

@dr_terp • Gas Chromatography Lead

“The GC-MS chromatography doesn’t lie. When you blast roots with synthetic rockwool salts, the chemical flush destroys delicate monoterpenes. In WildSeed’s living soil, volatile esters and delicate hydrocarbon rings are preserved in the resin glands. 0.00 PPM residual hydrocarbons, verified at low-temp 480°F–510°F vaporization.”

Analytical Monoterpene Rigor

With a PhD in organic chemistry and 12 years in pharmaceutical science, Dr. Terp anchors the analytical backbone of WildSeed. He bridges analytical gas chromatography with the reverence of a master sommelier.

- ✓ **The Golden Pocket (480°F–510°F):** Scientifically proven temperature envelope preserving delicate monoterpene rings (myrcene, limonene, linalool) from pyrolytic thermal scorching.
- ✓ **0.00 PPM Hydrocarbon Validation:** Gas Chromatography-Mass Spectrometry (GC-MS) verification confirming absolute zero residual solvent detection on all cold-cure live rosin.
- ✓ **Biological Ester Superiority:** Molecular proof that microbial root collaboration in no-till living soil synthesizes secondary metabolites that sterile synthetic salts cannot match.

The Reserve Roster (The Bench)

HOT-SWAPPABLE SQUAD

Mirroring the Sovereign Sports dynamic lineup architecture, WeedStack's battle-tested advocates are staged as active reserves that WildSeed can hot-swap into the Craft Tasting Lounge for specific dispensary drops, retail takeovers, and wholesale campaigns.

Couch Lock Carl
@couch_lock_carl • Indica Purist
6-WORD GURU
"Speaks in \$\\le 6\$ words. BT4991 tattoo. Deep living-soil relaxation advocate."

Dab Lab Derek
@dab_lab_derek • Rosin Purist
73u EVANGELIST
"Evangelical live rosin purist. Obsessed with 73u vs 90u micron separation and quartz bangers."

Old Growth Pete
@old_growth_pete • Soil Elder
HUMBOLDT 1987
"Humboldt elder since 1987. Smokes a 1993 pipe; fiercely allergic to corporate suits and rockwool."

Dispensary Gary
@dispensary_gary • Retail Hype
DROP CLOSER
"Former top car salesman who pushes limited cold-cure drops with unstoppable retail enthusiasm."

The Terp Truther
@terp_truther • Independent Lab Skeptic & Feud Specialist
COA SKEPTIC
SUBSTACK: THE TERPENE FILES
"Paranoid testing lab skeptic locked in a 14-month public feud with Dr. Terp. Scrutinizes every decimal on GC-MS reports and verifies WildSeed's 0.00 PPM purity with relentless scrutiny."

Dynamic Swarm Architecture: 7 Starting Seats • 5 Reserves Ready on Clio Metal

Autonomous Edge Topology

WildSeed is fully operational as an enterprise edge application. Real-time bio-telemetry feeds live greenhouse sensor state directly into Gemini 3.8 Flash advocate contexts.

CLOUDFLARE EDGE

Global 14ms Latency

Deployed across 330+ edge PoPs via Cloudflare Pages and serverless functions.

GEMINI 3.8 FLASH

Reactive Swarm

7 starting advocate personas + 5 reserve bench personas dynamically participating in customer dialogues.

SOIL BIO-TELEMETRY

Modbus Sensors

Continuous live monitoring of rhizosphere millivolts, leaf-temp deltas, and VPD curves.

LIVE GREENHOUSE TELEMETRY // BED #4 OKLAHOMA FORGE

● LIVE FEED

```
[03:14:02 UTC] Vapor Pressure Deficit (VPD): 1.18 kPa | Optimal Transpiration Window
[03:14:03 UTC] Root Zone Soil Temperature: 68.2°F | Microbial Activity Peak
[03:14:04 UTC] Mycorrhizal Bio-Electric Potential: -42.6 mV | Hyphae Connectivity Nominal
[03:14:05 UTC] Swarm Stools: 7 Starting Seated + 5 Reserve Bench Ready | Active Dialogue Stream Ready
